Prepared and submitted by
Quantum Professional Management Solutions cc
(Reg. no: 2002/097047/23)

Quantum Solutions is a Software Development, Testing, Implementation and overall IT support Company for the Banking Sector, with international experience in Asia, Africa, Australia and Europe, specializing in Temenos T24 Globus Core banking system.

We have completed many T24 Globus interface development projects, T24 implementations and T24 upgrade projects, and gained extensive experience at international level. Our staff members have completed assignments and projects for customers including:

- Credit Suisse Singapore
- Rubik Financial Services Australia
- Deutsche Bank Geneva Switzerland
- Marfin-Egnatia Bank
- BankPHB Lagos Nigeria
- National Bank of Kazakhstan
- Investec Bank Australia
- Nedbank Swaziland
- Mauritius Commercial Bank
- Swazi Bank
- Nedbank Namibia
- Namibian Post Office
- Nedbank Lesotho
- Central Bank Swaziland
- Cape of Good Hope Bank

We also specialise in the specification, design and implementation of bank requirements on the T24 Globus banking application package developed by Temenos. Our staff has undertaken a number of assignments in a Lead, Team and Project Management and Senior Developer positions, for international banks and specialist banking systems support companies.

Staff:

Quantum Solutions currently employ full time office staff members, two full time management members and over 20 technical and business consultants. Our technical staff members hold a cumulative experience pool of more than 163 years in Banking Sector systems development. Quantum Solutions have access to various professional resources worldwide, each resource holding more than 10 years T24 experience, which give the company the competitive edge on saving on programming time. This can be achieved as part of our resources is based in Australia, India, Canada and Taiwan. Because of the comprehensive technical solutions documents produced by Quantum Solutions it is possible and viable to let more than one developer work on the same project across the globe turning an eight hour working day into a twenty hour working day. This means faster development time and turnaround. These technical solutions documents form always part of the end product for the customer record.

Our Work:

We are able and prepared to deliver any of the following serves to our clients as part / total solutions to the needs of our clients:

1. Maintenance jobs

- a. File archiving
- b. COB maintenance
- c. System Speed en efficiency.

2. Upgrades and Conversions – System upgrades regarding G or R-version

- a. Upgrades from G11 to R9
- b. Decommission the old legacy systems and migration data to T24, with full data migration and reconciliation.

3. **Projects** – Jobs that might impact on the Banks' Customers and that has a definite due date or go-live date. Examples of types of jobs we classify as "projects" are:
 - a. Eg BOP version I and II reporting project – customer impact is that more information must be obtained from customers for certain transactions.
 - b. SMS transaction notification to customer, or SMS banking
 - c. Project and additional T24 module implementation enabling the Business to expand their offerings to customers
 - d. Interfaces from and into external system, i.e. MIS Data warehouse systems.

4. **Small jobs** – jobs that can be done in a couple of days (1 to 4 days) and which does not impact system performance or customers. Examples might include:
 - a. Enquiry reports which input parameters e.g. to enable teller to balance his till at closing
 - b. Transaction journal used by staff to tick against vouchers
 - c. Management and Operational reports [GL or PL reports]

5. **Data Mining** – Once of type requests where data dumps of information needed by management or typically finance department is provided
 - a. Once off report – typical [quick and dirty or jBased Dumps]
